

Conveyor Belts

MetaLine® Series 700 – Elastomeric repair technology for worn rubber parts

Professional elastomeric repair materials to be applied by troweling (ML 680) pouring or spraying (ML 760). For permanent longitudinal cut repairs. Adhesion to most rubber substrates is beyond the cohesion of the rubber itself. Solvent-free & non-toxic, sustainable technology.

Applications

- steel cord conveyor belts
- fabric conveyor belts
- solid woven conveyor belts
- overcoating of mechanical belt fasteners

Reference

- for permanent repairs – no quick fixes without time and preparation
- recommissioning after 12 hours at 20 °C (68 °F) at the earliest
- more wear resistant and durable than any original conveyor belt quality
