

Box-Cooler

MetaLine® Series 700 – **Corrosion protection for seawater systems**

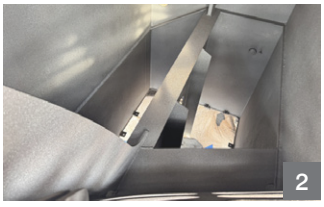

The tasks of box-coolers range from cooling the main engines to cooling the hydraulic systems – and always in salt water!

MetaLine® relies on the seamless inclusion of a “second” sprayed, rubber-like, thick skin. Exclusively in the sea chest and all water inlets (not the heat exchanger itself due to thermal insulating properties).

Applications

- sea chests
- cooler boxes (without the cooling pipework)

Reference

- closed, elastomeric tank-in-tank system (rubber cell)
- electrically insulating – permanent **anode-free** operation possible
- **biocide- and phenol-free**, passive anti-fouling function. Fouling can be cleaned off
