

Propellers / Tail Shafts / Subsea Systems

MetaLine® Series 700 – Cavitation protection for propulsion equipment

Low weight material characteristic and a tensionless high bond nature to many different substrates. MetaLine® changes the underwater signature of subsea operating vessels.

Applications

- drive shaft struts
- rope guards
- tail shafts
- propellers
- tidal turbines
- submarine antennas
- submarine rubber hull repairs
- ICCP shields

Reference

- approved up to 700 meter (2,300 ft) of diving depth in saltwater (pic. 6)
- adhesion / bond strength of up to 15 N/mm² (2,175 psi)
- good gamma radiation resistance and nuclear decontaminability
