

Pulp / Paper

MetaLine® Series 700 – Coatings for paper and cardboard production

Spray- or brushable repair compounds and wear resistant coatings to increase the service life of production equipment abused by severe corrosion and erosion. Elastomeric material properties avoid the dangerous “chipping” of common epoxy based rigid paint systems.

Applications

- pulper
- paper machine headboxes
- classifiers
- pulp pumps
- rubber rollers
- drying cylinders
- vacuum pumps

Reference

- can be machined mechanically (chip or chipless)
- very fast recommissioning and short repair times
- can be applied partially or over the entire surface in any required layer thickness
